USER INSIGHTS

While these insights apply to the entire platform, we refined them through targeted research to directly guide our feature design

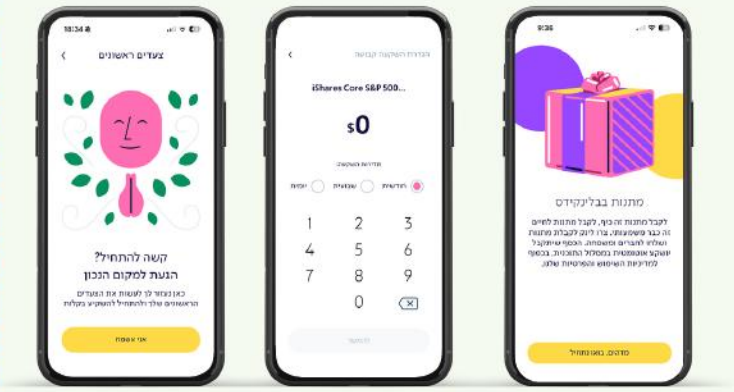

Small Steps Build Trust
Through user interviews and behavioral data, we discovered that large commitments intimidate beginners. Allowing users to start small helped us structure the feature to build confidence and habituate investing.

Bureaucracy Kills Retention
Analyzing existing user drop-offs and market research showed us that complex flows drive people away. We used this to design a streamlined, frictionless experience within the feature.

Social Validation Drives Action
Surveys and public market insights revealed that hesitant investors rely heavily on family and friends. This guided us to embed social proof directly into the feature logic.

Feature Discovery & Delivery

To address our research insights, we analyzed existing core mechanisms in the app that successfully tackle user friction. The screens below showcase features designed around similar user behaviors, serving as proven solutions and setting the foundation for the next features on the roadmap

First Steps
Guides new users step-by-step through their very first to build confidence.

Recurring Investment
Enables automated credit card deposits to effortlessly build investment habits.

Blink Kids Gifts
A simple shareable link allowing family and friends to send investment gifts to kids' accounts.

My Product Takeaways

Know Your Research Limits
Research is essential, but too much information can create confusion. Knowing when to stop researching helps maintain a clear product focus.

Independent Vision First
Forming your own creative ideas before looking at competitors or AI leads to a more original and accurate product direction.

Choosing the Right Solution
There is almost always more than one solution to a problem. The real challenge is deciding which option best fits your core goals.
